

easyformat, *tests*

$$\int_a^b dx = b - a$$

Evert Provoost

30th May 2017 (v1.4.0)

## Contents

<b>1</b>	<b>Main test</b>	<b>1</b>
<b>2</b>	<b><i>Math</i>, <i>underscores</i> and <i>circles</i>...</b>	<b>1</b>
<b>3</b>	<b>Mixing <i>styles</i></b>	<b>1</b>

## 1 Main test

These two should be identical and definitely have the exact same length:

| Lorem ***ipsum*** **totalem** DA **givea *zin*** **doram** *zettim*, liefkan. |  
| Lorem ***ipsum*** **totalem** DA **givea *zin*** **doram** *zettim*, liefkan. |

## 2 *Math*, *underscores* and *circles*...

This (↑ `easyformat-syntax` inside subtitles) is possible without some extra code since v1.1.0 (2017/04/09) and having a `^` in mathmode since v1.3.0 (2017/05/28).

$$\int_a^b x dx = \frac{b^2 - a^2}{2}$$

## 3 Mixing *styles*

YEAH, *yeah?*, YEAH!!! ← notice how we go from SMALLCAPS to *italics* and back to SMALLCAPS? This is possible since v1.2.0 (2017/04/17).
