1 Main test

These two should be identical and definitely have the exact same length:

| Lorem ipsum totalem DA givea zin doram zettim, liefkan.

| Lorem ipsum totalem DA givea zin doram zettim, liefkan. |

This test has had a consistent and correct result since v1.0.0 (2017/04/07).

2 Math, $u_n d_e r_s c_o r_e s$ and $\hat{c}^i r^c o^n f^l e^x e^s \dots$

This (\uparrow easyformat-syntax inside subtitles) is possible without some extra code since v1.1.0 (2017/04/09) and having a \uparrow (using \cir) in mathmode since v1.3.0 (2017/05/28) a possibility of which the kerning was fixed in v1.4.0 (2017/06/03).

$$\int_a^b x \, \mathrm{d}x = \frac{b^2 - a^2}{2}$$

3 Mixing styles

YEAH, yeah?, YEAH!!! \leftarrow notice how we go from SMALLCAPS to *italics* and back to SMALLCAPS? This is possible since v1.2.0 (2017/04/17).
